

The diversity of formats and their sources make the system integration a difficult issue, needing in most of the cases manual working, conversion programs and, sometimes, the load of unnecessary data. Watching that, and company needs, Sinapbit developed a tool that allows data interchange between different sources and formats, running applications by different triggers, automating process and data translations and conversions in the transfers.

```
Last_name= Johnson
First_name=Carl
Age= 43
City=New York

Johnson,Carl,43,New York
Douglas,Victor,27,Illinois
Bert,Joan,23,California

Activity 40 has been referred to Support
for client Smith
Please note the Activity Number
Activity Number: 40
```

There are a lot of typical applications and needs that require a tool like this :notifications or scalations in CRM systems that don't have them or are too complex to configure, mailings to clients according to a special condition, integration between different systems that have different databases, data entry coming from mails, reports generations in automatic way, to run applications fired by a mail or other data, server events notifications by mail or write them to a database and countless applications.

INPUTS

Conditions
Different Formats

WORKFLOW

CONNECTORS

Timing
Translation
Conversion

OUTPUTS

Multiple
Different Formats

It is an easy to install and configure tool, and it has an interface that allows in a few minutes to define the data inputs and outputs, that means a quick time to work.
